

SECURITY OPERATIONS BOARD BREIFING

ETHAN BYRD
CYBR 7930

EXECUTIVE SUMMARY

As DHHI prepares for a major organizational expansion, our security posture must evolve to protect our assets, our clients, and our reputation.

Key Message for the Board:

- Our current security structure will not scale with upcoming growth
- A modernized, proactive program is essential to operational continuity
- The proposed design strengthens resilience and aligns with NIST standards

THE PROBLEM

Today, DHHI's security program is functional but reactive. With our move to a larger headquarters and expansion of digital operations, the risks increase dramatically.

Board-Level Concerns:

- Greater attack surface during and after expansion
- Operational disruption risk due to outdated processes
- Potential financial and reputational damage
- Lack of unified, forward-looking security capabilities

SCOPE OF DHHIS NEW STRATEGY

This Security Operations Program is built to support DHHI's growth strategy and risk profile.

What This Framework Provides:

- A complete operating model for vulnerability, threat, and incident management
- Strong identity governance aligned with Zero Trust
- Integrated cloud security and data protection
- Mapped to NIST SP 800-12, SP 800-35, and SP 800-100

What It Does *Not* Provide:

- Vendor procurement or technical configuration details

CURRENT SECURITY ENVIRONMENT

Today's environment includes several effective tools, but they operate independently and require significant manual effort.

Current Capabilities:

- Endpoint security, patch management, SIEM, DLP, phishing training, cloud controls

Board-Level Insight:

- These controls work in isolation
- Lack of integration creates blind spots
- Reactive posture increases risk during growth

CURRENT RISKS AND GAPS

Our evaluation identified several material gaps that directly affect DHHI's operational readiness.

Key Gaps:

- Manual vulnerability prioritization slows risk reduction
- SIEM rules and alerting need tuning to improve accuracy
- Limited DLP visibility across cloud platforms
- Cloud governance is not yet mature
- Minimal automation in incident response

Impact to the Board:

- Longer detection times
- Increased exposure to financial and regulatory risk

FUTURE STATE VISION

Our proposed future state transforms DHHI from a reactive model to a proactive, intelligence-driven security organization.

Core Components:

- A unified Security Operations Center (SOC)
- Continuous vulnerability management with automated prioritization
- Automated incident response workflows
- Strong identity & access governance
- Mature cloud monitoring and configuration controls
- Expanded DLP across email, cloud, and collaboration systems

Board Takeaway:

This design future-proofs security as DHHI grows in size, complexity, and risk.

IMPROVEMENT ROADMAP

To ensure controlled, measurable progress, the program is divided into four strategic phases.

Phases:

- **Foundational Alignment (0–3 months)**
- **Operational Integration (3–6 months)**
- **Advanced Capabilities (6–12 months)**

Governance & Optimization (12–18 months)

Board Perspective:

- Predictable timelines
- Clear milestones
- Aligns investment with risk reduction

FOUNDATIONAL ALIGNMENT

This phase establishes the minimum governance and controls needed before advanced capabilities can be added.

Initiatives:

- Formalize security governance and documentation
- Strengthen endpoint protection and patch governance
- Implement cloud security baselines and enforce MFA

Board Insight:

Mitigates the most common and high-frequency risks early.

BUDGET OVERVIEW

The financial plan reflects the cost required to responsibly mature DHHI's security posture.

Proposed Investments:

- Threat Detection & Monitoring: **\$112,000**
- Enhanced Endpoint EDR: **\$69,500**
- Application Security: **\$30,000**
- Training & Phishing Programs: **\$12,000**
- Data Loss Prevention: **\$25,000**

Board Insight:

Budget aligns directly with risk reduction milestones across all phases.

SECURITY RUN BOOK

The Master Security Run Book forms the operational backbone of the entire program.

Purpose:

- Standardize all daily security operations
- Define clear roles and responsibilities
- Provide step-by-step incident response procedures
- Govern identity, cloud, DLP, vulnerability, and DR operations

Board Insight:

This ensures consistency, accountability, and regulatory defensibility.

FINAL RECOMMENDATION

DHHI is at a pivotal stage in its growth. Implementing this program will:

- Reduce operational and reputational risk
- Strengthen our ability to protect client trust and data
- Improve detection and response times
- Support long-term scalability and business continuity
- Position DHHI as a security-mature consulting firm

Closing Message:

This roadmap provides the structure and discipline needed to secure DHHI's future. Your support ensures the company grows with confidence and resilience.
